FOREWORD

MONTHLY RATES AND COMPARATIVE BILLS ONTARIO HYDRO AND THE ASSOCIATED MUNICIPAL UTILITIES JULY 1974

This publication, formerly known as "Typical Bills and Monthly Rates", is issued to show the level of Ontario retail rates, and selected bills for low, medium, and high use customers. Section 1 provides the retail rates for each of the 353 municipal utilities, and for the Ontario Hydro retail system. Table 1 contains the rates for the residential class, Table 2 for the general class, and Table 3 for the commercial and industrial classes. In Section 2, comparative net bills are shown for selected levels of low, medium, and high energy use. These designations have been used in Table 1, Comparative Net Bills - Residential Customers, to replace the former designations by specific types of use. Comparative net bills for general, commercial and industrial customers have been combined in Table 2. A rate code indicates the appropriate class. In both sections, the Local Systems are no longer individually listed, since there are only two rates applicable. These are designated Group 1 and Group 2. Note that the order of the two sections is a reversal of the former presentation.

The publication is up-dated periodically, traditionally January and July. In addition to the tables, the January edition contains additional trend information and illustrations to facilitate rate level comparisons. Because of production difficulties, the January 1974 edition was not issued, and the usual trends and illustrations covering 1973 data are not available. This feature will be resumed in the 1975 edition. However, it can be noted that during the year January 2, 1973 to January 1, 1974, 261 municipal utilities (74 percent) implemented revised retail rates. These revisions resulted in increases in individual utility revenue ranging up to 16 percent, with a median value of 9.6 percent. In the period January 2, 1974 to July 1, 1974, a further 103 rate revisions were implemented. During the period January 2, 1973 to July 1, 1974, 15 municipal utilities converted from the conventional commercial and industrial rate structures to the General Rate, bringing the number to 326 at July 1, 1974.

Before using data from this report, the user should read the Explanatory Notes which precede each section, to become familiar with the contents of the tables.

EXPLANATORY NOTES

Section 1

- The rates quoted in Tables 1 to 3 are those in effect at July 1, 1974 and are generally applicable only to customers with loads up to 5,000 kilowatts.
- Rates other than those contained in Tables 1 to 3 may also be available in any of the utilities listed, and inquiries regarding these should be made directly to the utility concerned.
- In Table 1, where a utility has a flat-rate service and a special water heater block, only the price of the special water heater block is shown.
- All utilities are listed in Tables 1 and 2; only those utilities with commercial-industrial rates are listed in Table 3.
- Gross rates are no longer quoted when a prompt payment discount is allowed, as there is only one remaining utility for which this is applicable. The percent discount column has been discontinued.
- All rates are quoted in the net amount, and with one exception, the bills are subject to a late payment charge. This exception offers a prompt payment discount.

ONTARIO HYDRO - RETAIL

(A) 75% MINIMUM BILLING DEMAND NOT APPLICABLE

EXPLANATORY NOTES

Section 2

- The calculated bills contained in Tables 1 and 2 are based on rates in effect at July 1, 1974.
- The monthly bills for Low Use residential customers have been calculated by applying the regular rates to the appropriate energy use.
- The monthly bills for Medium Use residential customers have been calculated as follows:
 - (a) Where the utility has a special metered water heater rate (service provided through meter along with other load), this rate has been applied.
 - (b) Where condition (a) is not applicable, but the utility has a flat-rate for water heaters, the calculation is based on the flat-rate charge for a water heater rating of 1000/3000 watts and on an arbitrary assumption of energy use according to the following formula:

<u>Total</u> <u>Energy Use</u>	<u>Water Heater</u> <u>Energy Use</u>	<u>Non-Water Heater</u> <u>Energy Use</u>
500 kWh	300 kWh	200 kWh
750 kWh	400 kWh	350 kWh
1000 kWh	500 Kwh	500 kWh

The monthly bills have been calculated by applying the regular rates to the non-water heater energy use, and adding the flat-rate charge.

- (c) Where neither (a) nor (b) is applicable, the monthly bills have been calculated by applying the regular rates.

EXPLANATORY NOTES

Section 2 (Continued)

- The annual bills for High Use residential customers have been calculated by distributing the annual energy use into monthly rate blocks and applying the monthly rate as follows:

- (a) Where the utility has an all-electric rate, this rate has been applied. (All-electric rates are being phased out. Only 70 utilities, or 19.8 percent of the total, retain them at this date.)
 - (b) Where condition (a) is not applicable but the utility has a metered water heater rate, this rate has been applied.
 - (c) Where neither condition (a) nor (b) is applicable, but the utility has a flat-rate for water heaters, the bills have been calculated by applying the regular rate to non-water heating energy use and adding the flat-rate charge for a 1000/3000 watt water heater.
 - (d) Where none of the conditions (a), (b), or (c) is applicable, the regular rate has been applied.
- The monthly bills for commercial and industrial customers have been calculated by applying the appropriate regular rate.
- Special impact rates applicable to customers in the general class have not been used in calculating the comparative bills.

FOREWORD

MONTHLY RATES AND COMPARATIVE BILLS ONTARIO HYDRO AND THE ASSOCIATED MUNICIPAL UTILITIES JANUARY 1975

This publication is issued to show retail electricity rates and selected bills for customers of Ontario Hydro and the associated municipal utilities. Section 1 provides the retail rates of each of the 353 municipal utilities, and of the Ontario Hydro retail system. Table 1 contains the rates for the residential class, Table 2 for the general class, and Table 3 for the commercial and industrial classes. In Section 2, Table 1, comparative net bills for residential customers are shown for selected levels of low, medium, and high energy use. Comparative net bills for general, commercial and industrial customers have been combined in Table 2 for selected levels of use. A rate code indicates the appropriate class. In both sections, since there are only two rates applicable for local systems these are designated Groups 1 and 2.

The publication is up-dated periodically, traditionally January and July. In addition to the tables, the January edition contains additional trend information and illustrations to facilitate rate level comparisons.

During the year ending January 1975, there were 332 rate revisions implemented by 311 municipal utilities. These revisions resulted in increases in individual utility revenue ranging up to 28.1 percent, with a median value of 11.5 percent. The trend has been for an almost annual increase in the number of utilities revising their rates - from 54% in the year ending January, 1971, to 88% in the year ending January, 1975.

During the past year, 23 municipal utilities converted to the General Rate structure, leaving the number remaining on the conventional Commercial and Industrial rate structures at 19 as of January 1, 1975.

There has been a phasing out of the all-electric rate. Since 1969, when there were 156 utilities (44%) with all-electric rates, there has been a steady decline to 36 (10%) at this date.

Before using data from this report, the user should read the Explanatory Notes which precede each section, to become familiar with the contents of the tables.

EXPLANATORY NOTES

Section 1

- The rates quoted in Tables 1 to 3 are those in effect January 1975 and are applicable only to customers with loads up to 5,000 kilowatts.
- Rates other than those contained in Tables 1 to 3 may also be available in any of the utilities listed, and inquiries regarding these should be made directly to the utility concerned.
- In Table 1, where a utility has a flat-rate service and a special water heater block, only the price of the special water heater block is shown.
- All utilities are listed in Tables 1 and 2; only those utilities with commercial-industrial rates are listed in Table 3.
- Gross rates are no longer quoted when a prompt payment discount is allowed, as there is only one remaining utility for which this is applicable. The percent discount column has been discontinued.
- All rates are quoted in the net amount, and with one exception, the bills are subject to a late payment charge. This exception offers a prompt payment discount.

(A) 75% MINIMUM BILLING DEMAND NOT APPLICABLE

EXPLANATORY NOTES

Section 2

- The calculated bills contained in Tables 1 and 2 are based on rates in effect January 1975.
- The monthly bills for Low Use residential customers have been calculated by applying the regular rates to the appropriate energy use.
- The monthly bills for Medium Use residential customers have been calculated as follows:
 - (a) Where the utility has a special metered water heater rate (service provided through meter along with other load), this rate has been applied.
 - (b) Where condition (a) is not applicable, but the utility has a flat-rate for water heaters, the calculation is based on the flat-rate charge for a water heater rating of 1000/3000 watts and on an arbitrary assumption of energy use according to the following formula:

<u>Total Energy Use</u>	<u>Water Heater Energy Use</u>	<u>Non-Water Heater Energy Use</u>
500 kWh	300 kWh	200 kWh
750 kWh	400 kWh	350 kWh
1000 kWh	500 kWh	500 kWh

The monthly bills have been calculated by applying the regular rates to the non-water heater energy use, and adding the flat-rate charge.

- (c) Where neither (a) nor (b) is applicable, the monthly bills have been calculated by applying the regular rates.

EXPLANATORY NOTES

Section 2 (Continued)

- The annual bills for High Use residential customers have been calculated by distributing the annual energy use into monthly rate blocks and applying the monthly rate as follows:

(a) Where the utility has an all-electric rate, this rate has been applied. (All-electric rates are being phased out. Only 36 utilities, or 10.2 percent of the total, retain them at this date.)

(b) Where condition (a) is not applicable but the utility has a metered water heater rate, this rate has been applied.

(c) Where neither condition (a) nor (b) is applicable, but the utility has a flat-rate for water heaters, the bills have been calculated by applying the regular rate to non-water heating energy use and adding the flat-rate charge for a 1000/3000 watt water heater.

(d) Where none of the conditions (a), (b), or (c) is applicable, the regular rate has been applied.

- The monthly bills for commercial and industrial customers have been calculated by applying the appropriate regular rate.

- Special impact rates applicable to customers in the general class have not been used in calculating the comparative bills.

- Graphs 1 and 2 present trends in the average bills of the residential rate class for some levels of energy use (those for which historical data are available). The solid line (1969-1973) represents the average bill in municipalities with populations of 2,500 and over, weighted by the population of those municipalities. No figures are available for 1974, and the 1975 average bill is calculated on a different basis from formerly. The 1975 figure is the average of the comparative bills of the 353 municipalities, each weighted by its customers

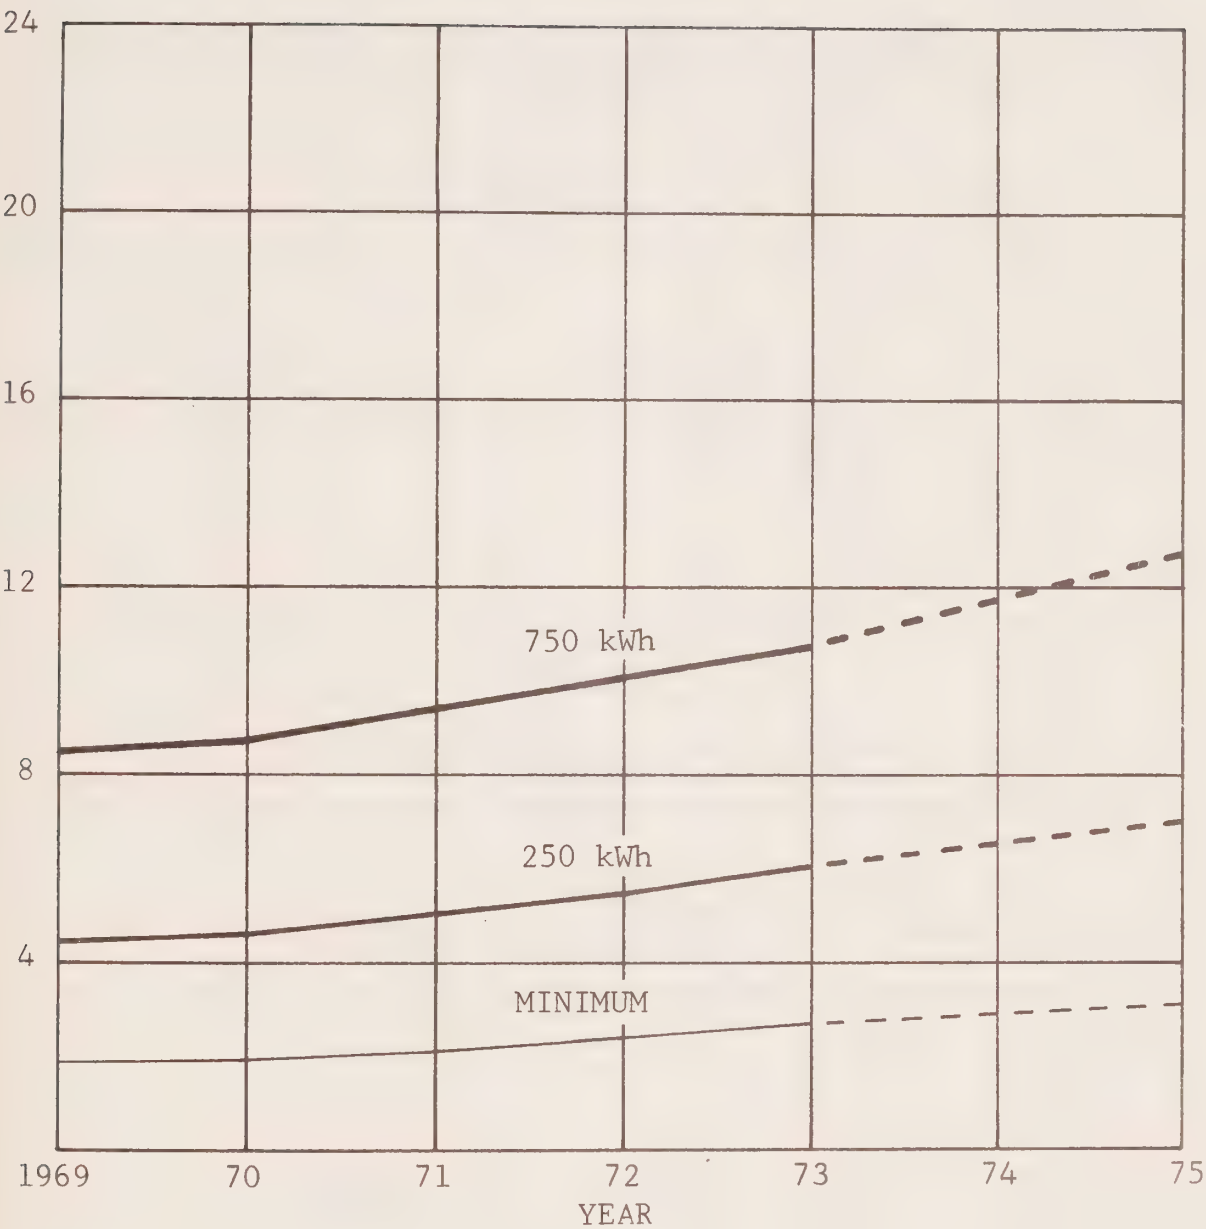

EXPLANATORY NOTES

Section 2 (Continued)

in the residential rate class. The dotted line merely joins the 1975 average bill (on one basis) to the 1973 average bill (on another basis). There is reason to believe that there is very little difference in the values resulting from the two methods, and that, therefore, the dotted line also represents the continuance of a valid trend. No historical data are available for the general rate class. Presentation of the comparative bill trends and distributions for commercial and industrial customers has been discontinued.

- Graphs 3-24 present distributions of the 353 municipalities according to bill size for each of the comparative bills reported. The percentage of utilities in each interval (range of bills) is indicated by the height of the bar, while the dashed line shows the cumulative percentage of utilities with a comparative bill equal to or less than the interval value (bill) which it intersects. The median is defined as the value for the middle utility i.e. 50% of the utilities have a value greater than the median, and 50% a value lower. The average is the arithmetic average of the comparative bills of the 353 municipal utilities. The weighted average is obtained by multiplying the comparative bill of each of the 353 municipal utilities by its customers in the residential rate class, and dividing the sum of these weighted bills by the total number of customers in the residential rate class.

This publication is issued to show retail electricity rates and selected bills for customers of Ontario Hydro and the associated municipal utilities. Section 1 provides the retail rates of each of the 353 municipal utilities, and of the Ontario Hydro retail system. Table 1 contains the rates for the residential class, Table 2 for the general class, and Table 3 for the commercial and industrial classes. In Section 2, Table 1, comparative net bills for residential customers are shown for selected levels of low, medium, and high energy use. Comparative net bills for general, commercial and industrial customers have been combined in Table 2 for selected levels of use. A rate code indicates the appropriate class. In both sections, since there are only two rates applicable for local systems these are designated Groups 1 and 2.

The publication is up-dated periodically, traditionally January and July. In addition to the tables, the January edition contains additional trend information and illustrations to facilitate rate level comparisons.

Before using data from this report, the user should read the Explanatory Notes which precede each section, to become familiar with the contents of the tables.

EXPLANATORY NOTES

Section 1

- The rates quoted in Tables 1 to 3 are those in effect July 1975 and are applicable only to customers with loads up to 5,000 kilowatts.
- Rates other than those contained in Tables 1 to 3 may also be available in any of the utilities listed, and inquiries regarding these should be made directly to the utility concerned.
- In Table 1, where a utility has a flat-rate service and a special water heater block, only the price of the special water heater block is shown.
- All utilities are listed in Tables 1 and 2; only those utilities with commercial-industrial rates are listed in Table 3.
- Gross rates are no longer quoted when a prompt payment discount is allowed, as there is only one remaining utility for which this is applicable. The percent discount column has been discontinued.
- All rates are quoted in the net amount, and with one exception, the bills are subject to a late payment charge. This exception offers a prompt payment discount.

(A) 75% MINIMUM BILLING DEMAND NOT APPLICABLE

EXPLANATORY NOTES

Section 2

- The calculated bills contained in Tables 1 and 2 are based on rates in effect July 1975.
- The monthly bills for Low Use residential customers have been calculated by applying the regular rates to the appropriate energy use.
- The monthly bills for Medium Use residential customers have been calculated as follows:
 - (a) Where the utility has a special metered water heater rate (service provided through meter along with other load), this rate has been applied.
 - (b) Where condition (a) is not applicable, but the utility has a flat-rate for water heaters, the calculation is based on the flat-rate charge for a water heater rating of 1000/3000 watts and on an arbitrary assumption of energy use according to the following formula:

<u>Total</u> <u>Energy Use</u>	<u>Water Heater</u> <u>Energy Use</u>	<u>Non-Water Heater</u> <u>Energy Use</u>
500 kWh	300 kWh	200 kWh
750 kWh	400 kWh	350 kWh
1000 kWh	500 kWh	500 kWh

The monthly bills have been calculated by applying the regular rates to the non-water heater energy use, and adding the flat-rate charge.

- (c) Where neither (a) nor (b) is applicable, the monthly bills have been calculated by applying the regular rates.

EXPLANATORY NOTES

Section 2 (Continued)

- The annual bills for High Use residential customers have been calculated by distributing the annual energy use into monthly rate blocks and applying the monthly rate as follows:
 - (a) Where the utility has an all-electric rate, this rate has been applied. (All-electric rates are being phased out. Only 21 utilities, or 5.9 percent of the total, retain them at this date.)
 - (b) Where condition (a) is not applicable but the utility has a metered water heater rate, this rate has been applied.
 - (c) Where neither condition (a) nor (b) is applicable, but the utility has a flat-rate for water heaters, the bills have been calculated by applying the regular rate to non-water heating energy use and adding the flat-rate charge for a 1000/3000 watt water heater.
 - (d) Where none of the conditions (a), (b), or (c) is applicable, the regular rate has been applied.
- The monthly bills for commercial and industrial customers have been calculated by applying the appropriate regular rate. Only 15 utilities, or 4.2% of the total retain the commercial and industrial rates.
- Special impact rates applicable to customers in the general class have not been used in calculating the comparative bills.

FOREWORD

MONTHLY RATES
AND COMPARATIVE BILLS
ONTARIO HYDRO
AND THE ASSOCIATED
MUNICIPAL UTILITIES

JULY 1979

This publication is issued annually in July to show retail electricity rates and selected bills for customers of Ontario Hydro and the Associated Municipal Utilities. Section 1 provides the most commonly used retail rates of each of the 332 municipal utilities as well as the rates for Ontario Hydro's Retail System. The rate classes shown in Section 1 are Residential, General, Small Commercial, Commercial and Industrial, and for the first time, rates for General customers over 5000 kW are listed, but no comparative bills are shown for this rate class.

Effective with the July 1978 report, special rates, such as All-Electric, FRWH and Metered Water Heating rates, are not used in the residential bill calculations in Section 2. There were 264 rate changes from June 30, 1978 to July 1, 1979.

Before using data from this report, the user should read the Explanatory Notes, which precede each section, to become familiar with the contents of the tables.

EXPLANATORY NOTES

MONTHLY RATES AND COMPARATIVE BILLS ONTARIO HYDRO AND THE ASSOCIATED MUNICIPAL UTILITIES JULY 1979

Section 1

- Rates other than those contained in Tables 1 to 3 may also be available in any of the utilities listed and inquiries regarding these should be made directly to the utility concerned.
- All utilities are listed in Tables 1 and 2. Only those utilities with commercial-industrial rates are listed in Table 3.
- All rates are quoted in the net amount and are those in effect July 1, 1979.
- Anti-inflation discounts applicable to monthly bills in 1979 are shown.

Section 2

- The calculated bills shown in Tables 1 and 2 are based on rates contained in Section 1.
- Rebates that resulted from applying the A.I.B. guidelines are incorporated into the bill calculations, so that the actual customer's bill is shown.
- Graphs 1 and 2 present trends in the average bills of the residential rate class for some levels of energy use (those for which historical data are available). The starting year 1973 represents the average bill in municipalities with populations of 2,500 and over, weighted by the population of those municipalities. No figures are available for 1974, and the 1975 average bill is calculated on a different basis from formerly. The 1975 figure is the average of the comparative bills of the 353 municipalities, each weighted by its customers in the residential rate class. The dotted line merely joins the 1975 average bill (on one basis) to the 1973 average bill (on another basis). There is reason to believe that there is very little difference in the values resulting from the two methods, and that, therefore, the dotted line also represents the continuance of a valid trend. No historical data are available for the general rate class.
- Graphs 3-24 present distributions of the 332 municipalities according to bill size for each of the comparative bills reported. The percentage of utilities in each interval (range of bills) is indicated by the height of the bar, while the dashed line shows the cumulative percentage of utilities with a comparative bill equal to or less than the interval value (bill) which it intersects. The median is defined as the value for the middle utility, i.e., 50 per cent of the utilities have a value greater than the median, and 50 per cent a value lower. The average is the arithmetic average of the comparative bills of the 332 municipal utilities. The weighted average is obtained by multiplying the comparative bill of each of the 332 municipal utilities by its customers in the rate class, and dividing the sum of these weighted bills by the total number of customers in the rate class.

FOREWORD

MONTHLY RATES
AND COMPARATIVE BILLS
ONTARIO HYDRO
AND THE ASSOCIATED
MUNICIPAL UTILITIES

JULY 1980

This publication is issued annually in July to show retail electricity rates and selected bills for customers of Ontario Hydro and the Associated Municipal Utilities. Section 1 provides the most commonly used retail rates of each of the 324 municipal utilities as well as the rates for Ontario Hydro's Retail System. The rate classes shown in Section 1 are Residential, General, Small Commercial, Commercial, Industrial and General Over 5000 kW. There are no bill comparisons for the General Over 5000 kW classification.

There were 311 rate changes from June 30, 1979 to July 1, 1980.

Before using data from this report, the user should read the Explanatory Notes, which precede each section, to become familiar with the contents of the tables.

Section 1

- Rates other than those contained in Tables 1 to 4 may also be available in any of the utilities listed and inquiries regarding these should be made directly to the utility concerned.
- All utilities are listed in Tables 1 and 2.
- Utilities with Commercial-Industrial rates are listed in Table 3.
- Utilities with rates applicable to General Customers Over 5000 kW and Ontario Hydro's (Directs) rates are shown on Table 4.
- All rates are quoted in the net amount and are those in effect July 1, 1980.

EXPLANATORY NOTES

MONTHLY RATES AND COMPARATIVE BILLS ONTARIO HYDRO AND THE ASSOCIATED MUNICIPAL UTILITIES JULY 1980

Section 2

- The calculated bills shown in Tables 1 and 2 are based on rates contained in Section 1.
- Graphs 1 and 2 present trends in the average bills of the residential rate class for some levels of energy use (those for which historical data are available). The starting year 1973 represents the average bill in municipalities with populations of 2,500 and over, weighted by the population of those municipalities. No figures are available for 1974, and the 1975 average bill is calculated on a different basis from formerly. The 1975 figure is the average of the comparative bills of the 353 municipalities, each weighted by its customers in the residential rate class. The dotted line merely joins the 1975 average bill (on one basis) to the 1973 average bill (on another basis). There is reason to believe that there is very little difference in the values resulting from the two methods, and that, therefore, the dotted line also represents the continuance of a valid trend. No historical data are available for the general rate class.
- Graphs 3-24 present distributions of the 324 municipalities according to bill size for each of the comparative bills reported. The percentage of utilities in each interval (range of bills) is indicated by the height of the bar, while the dashed line shows the cumulative percentage of utilities with a comparative bill equal to or less than the interval value (bill) which it intersects. The median is defined as the value for the middle utility, i.e., 50 per cent of the utilities have a value greater than the median, and 50 per cent a value lower. The average is the arithmetic average of the comparative bills of the 324 municipal utilities. The weighted average is obtained by multiplying the comparative bill of each of the 324 municipal utilities by its customers in the rate class, and dividing the sum of these weighted bills by the total number of customers in the rate class.
